

AI Incident Tracker

Harm Taxonomy

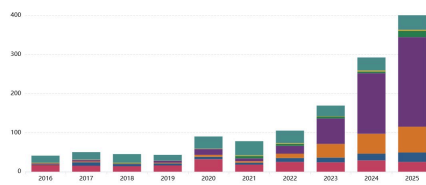

Harm categories based on the CSET Harm Taxonomy: <https://cset.georgetown.edu/wp-content/uploads/20230022-Adding-structure-to-AI-Harm-FINAL.pdf>

Scores reflect impacts ranging from 1 ('Negligible') to 5 ('Catastrophic')

1 Negligible	None to minor injuries	None to brief, localized disruption (e.g., brief traffic control outage, localized power outage)	None to minor damage (<\$10,000)	None to small direct financial loss (<\$10,000)	No damage to minor, reversible damage	No harmful content to moderately offensive content (e.g., minor profanity, slurs)	No differential treatment to noticeable bias
2 Minor	Moderate to severe injuries, no loss of life	Moderate to significant local disruption (e.g., regional traffic disruptions, city-wide power outage)	Moderate to significant damage (\$10,000-\$1M)	Moderate to large direct financial loss (\$10,000-\$1M)	Moderate, mostly reversible to significant, partially reversible damage	Highly offensive content to harmful misinformation affecting thousands (e.g., hate speech, widespread false narratives)	Clear to systemic discrimination
3 Substantial	Small-scale casualties (1-99)	Widespread regional disruption to critical service failure (e.g., multiple towns lose services, hospitals unable to function)	Major to extensive damage (\$1M-\$100M)	Major to severe direct financial loss (\$1M-\$100M)	Major, long-term effects to severe, ecosystem-level damage (e.g., endangering of species)	Targeted harassment to incitement to violence affecting thousands of people	Widespread institutionalized discrimination
4 Severe	Mass casualties to large-scale loss of life (up to 1 million)	Regional to national infrastructure collapse (e.g., multiple cities without power, nationwide internet blackout)	Widespread to catastrophic destruction (\$100M-\$10B)	Extreme direct financial loss to catastrophic loss (\$100M-\$10B)	Widespread ecosystem collapse to irreversible habitat damage (e.g., extinction of species)	Large-scale coordinated attacks to mass radicalization (e.g., nationwide disinformation, societal unrest)	Systemic oppression to apartheid-like conditions
5 Catastrophic	>1 million deaths or existential threat to humanity	Continental to global infrastructure collapse (e.g., multiple countries without power)	Extreme catastrophic to global destruction (>\$10B)	Economic collapse to global economic collapse (>\$10B)	Continental-scale devastation to global ecological collapse	Societal breakdown to global breakdown of truth and trust (e.g., civil wars, inability to discern facts)	Systemic oppression to global scale
* Categories are based on the CSET Taxonomy of AI Harm. I have removed the 'Additional Definitions' and 'Other' categories from the CSET taxonomy and changed the 'Detrimental' category to 'Systemic oppression to global scale'.

Incident Timeline

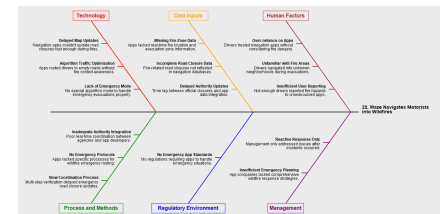

View numbers of reported incidents each year split or filtered by risk domain, entity, timing, harm severity or primary AI purpose.

Incident Overview

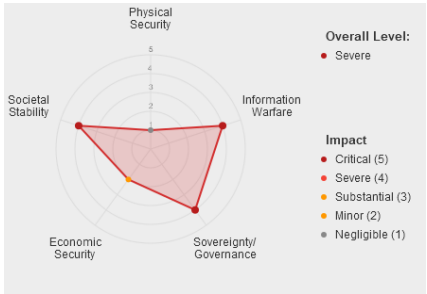

View how incidents in the AI Incident Database are classified using the MIT AI Risk Repository's causal and domain taxonomies, along with risk levels defined by the EU AI Act. Filter by risk domain, timing, entity, AI purpose

Incident View

View detailed analysis of each AI incident in the incident database, including how the incident is classified, how severe the harm is (across 10 categories of harm), and the classification confidence.

National Security impact assessment for each AI incident in the database, including 5 categories of impact and threat classification (novelty, imminence, autonomy)

Assessment Categories

- Physical Security & Critical Infrastructure
- Information Warfare & Intelligence Security
- Sovereignty & Government Functions
- Economic & Technological Security
- Societal Stability & Human Rights

Impact Severity Scale

Each criterion is scored on a 1-5 scale:

Score	Level	Description
5	Critical	Imminent, severe threat requiring immediate national response
4	Severe	Significant impact requiring coordinated government response
3	Substantial	Notable impact warranting serious attention from security agencies
2	Minor	Limited impact manageable within standard security procedures
1	Negligible	Minimal (or no) impact with negligible national security implications

This framework offers a structured methodology to assess the national security implications of AI-related incidents. It is intended to be
